

Biogen welcomes

Melanie Villalobos Garcia

August 28th, 2023

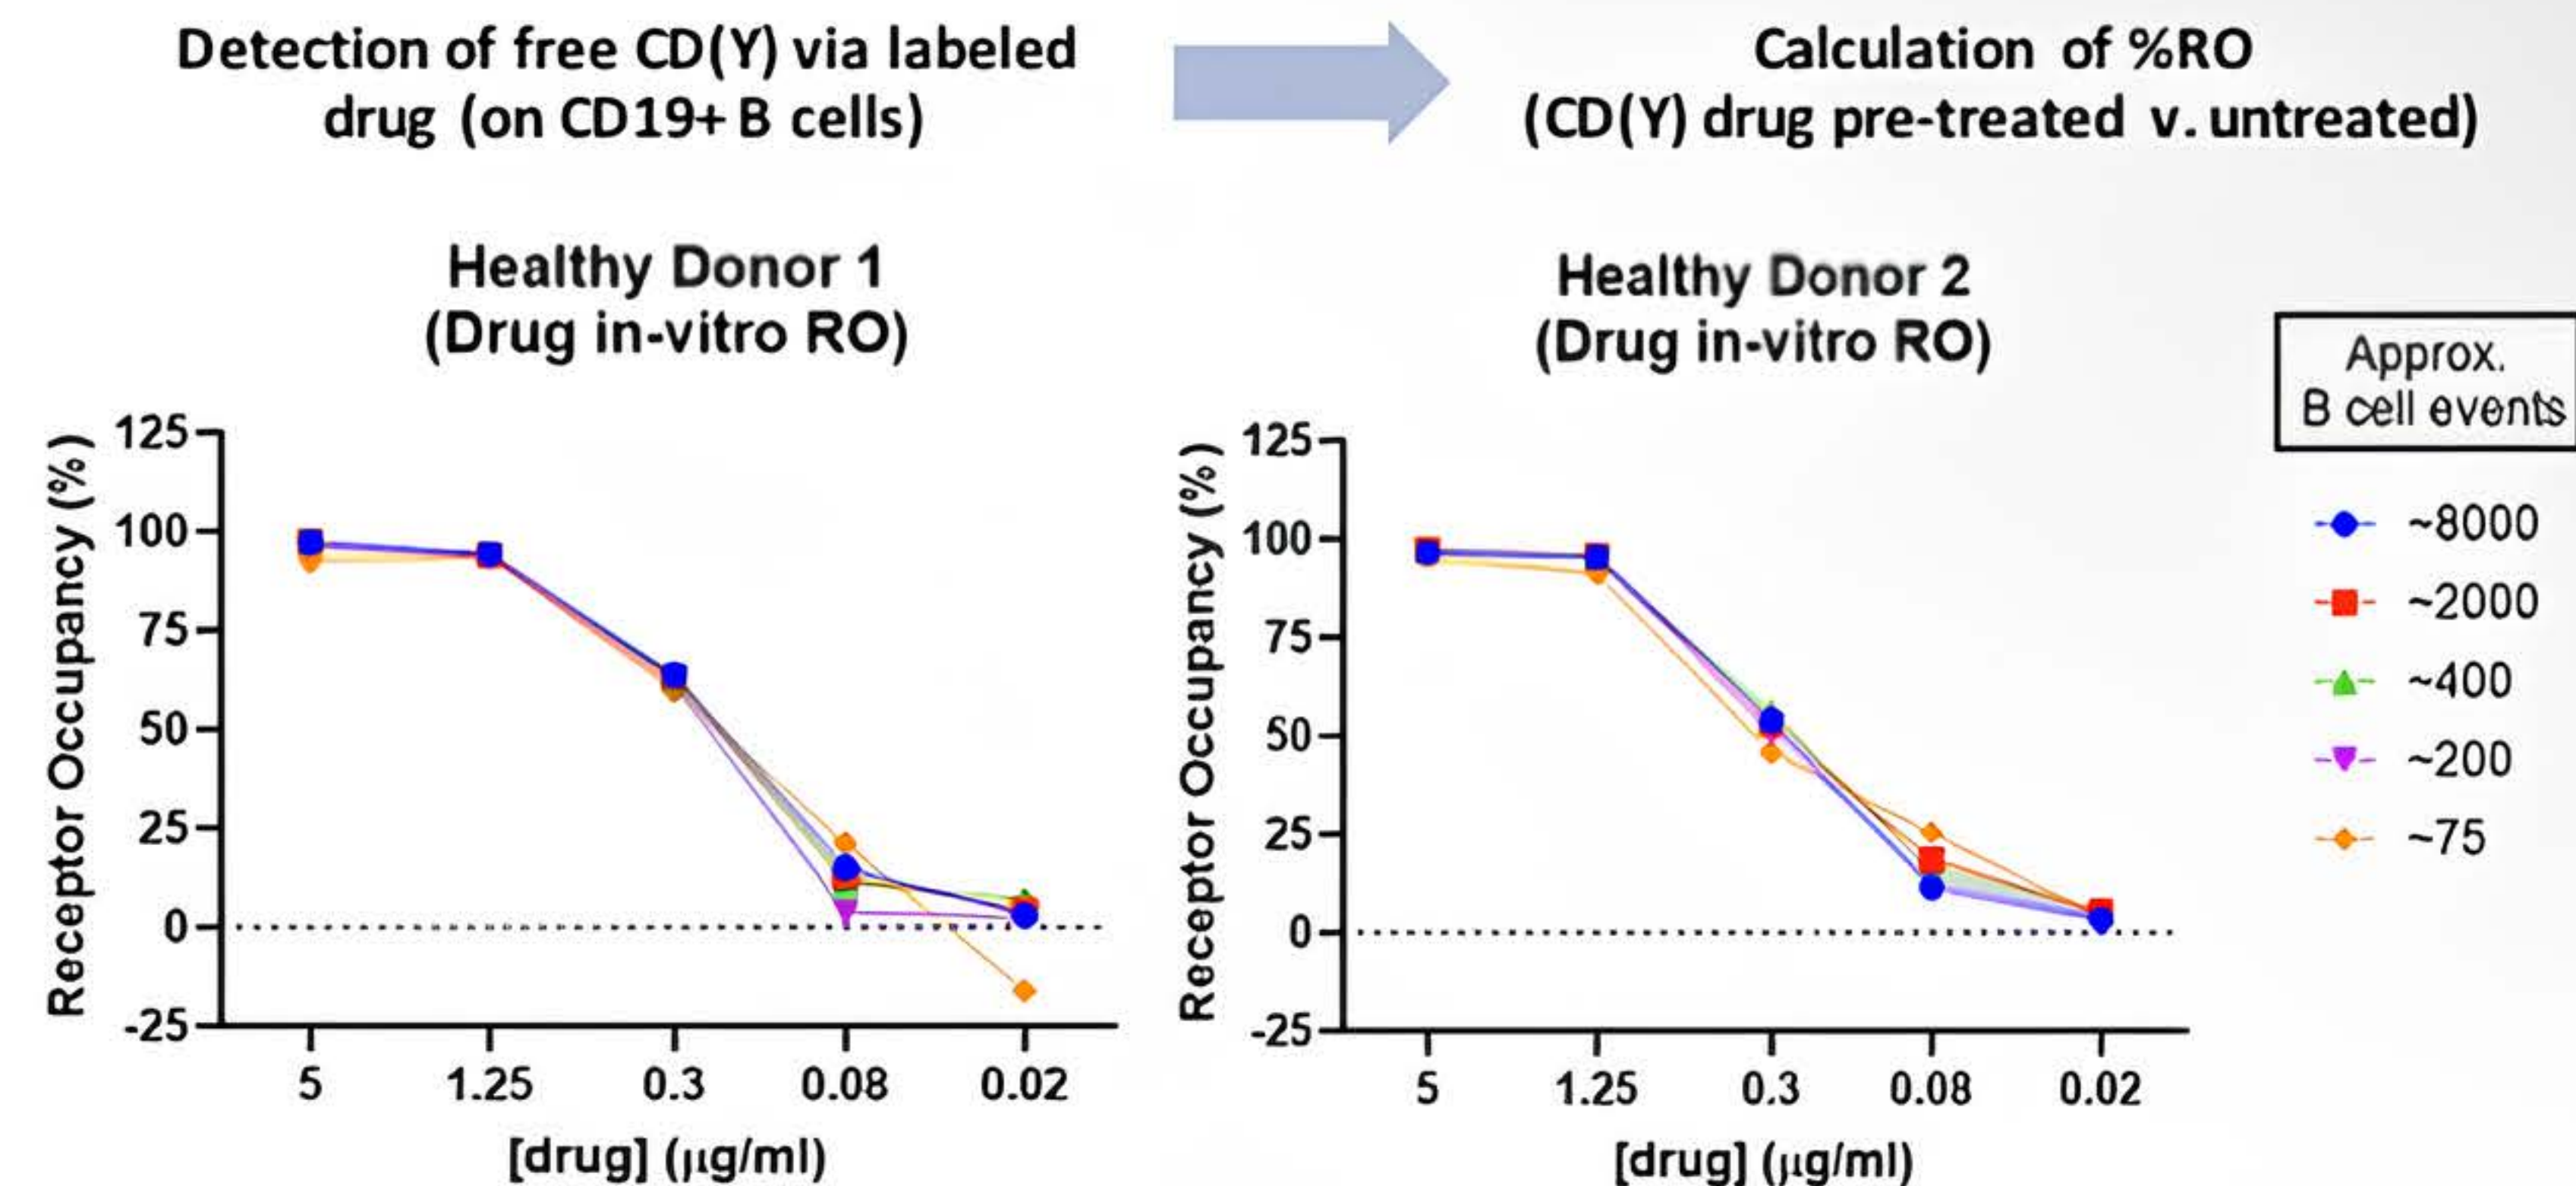

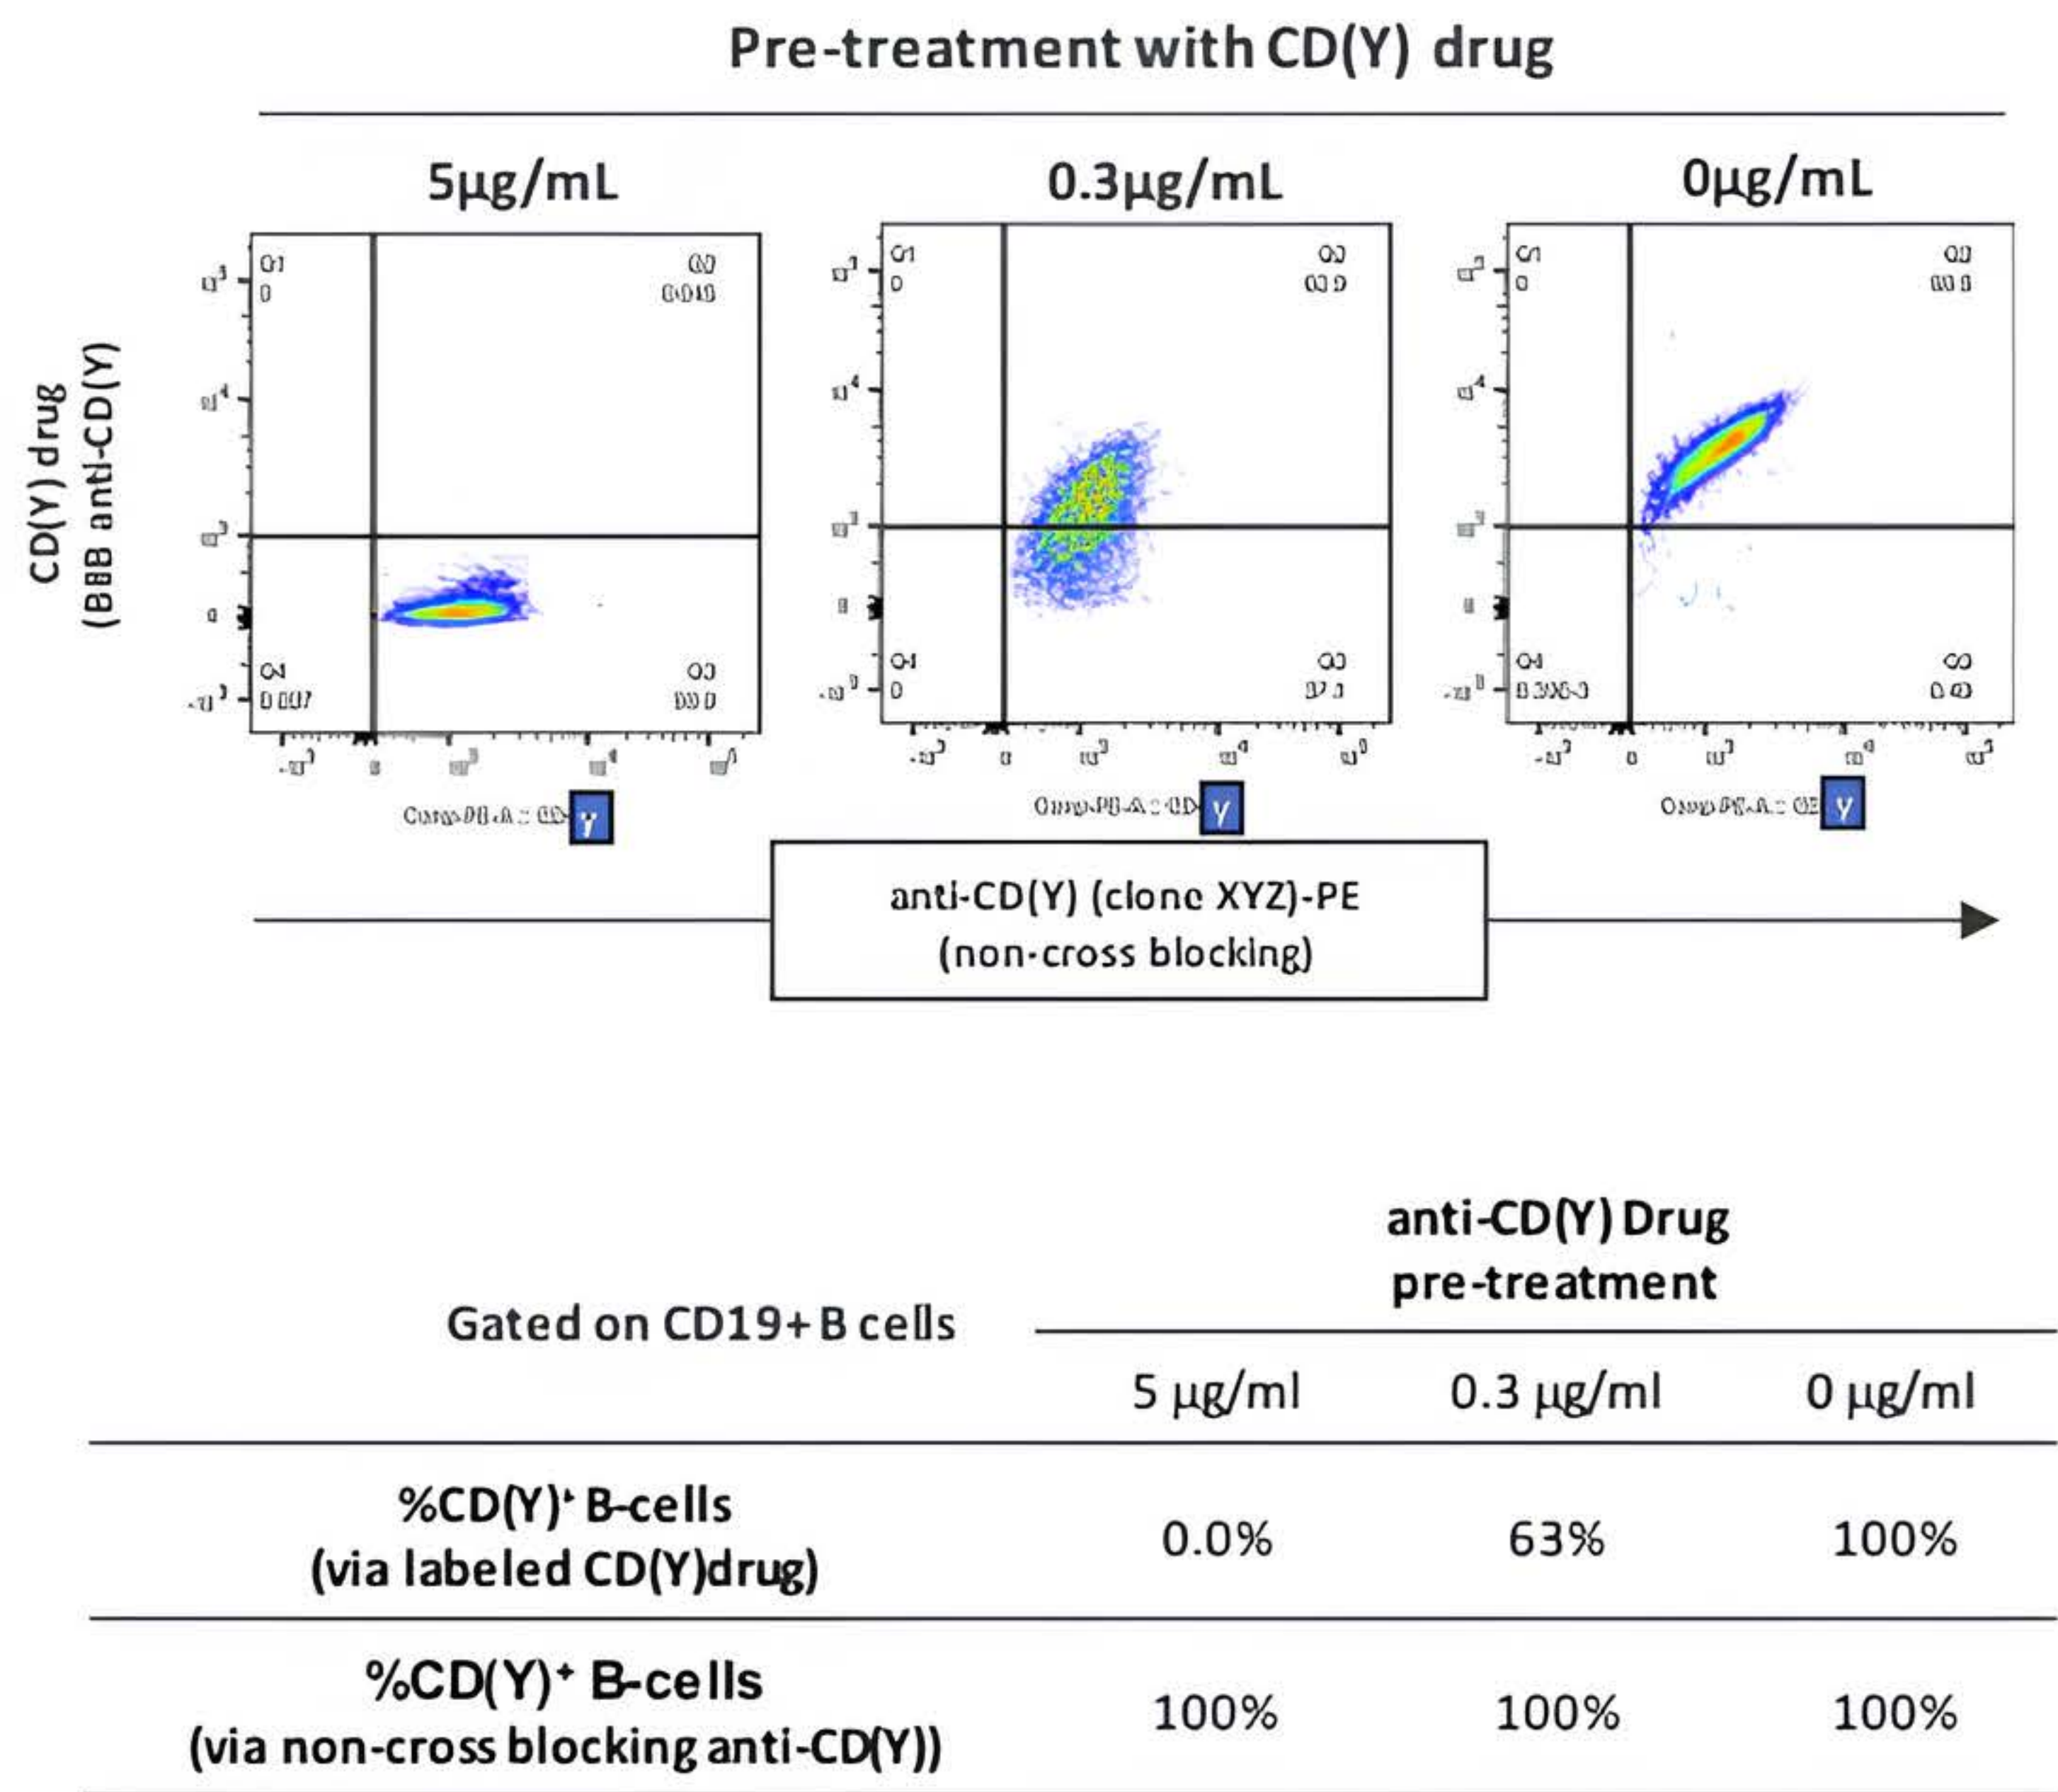

co-op presentation #1 by Melanie Villalobos

2

Cell Surface CD(Y) Receptor Occupancy

Use of a Flow Cytometry Assay

- Feasibility assessment of a novel flow cytometry method in CSF for measuring cell surface CD(Y) RO% suggests the potential for promising results.
- To be added to Final Presentation

Next steps

- Increase N of donors to understand variability in TE at lower drug concentrations and lower cell counts to increase confidence on CSF feasibility
- Assess, cell viability and TE in cells resuspended in artificial CSF
- Test transfix tubes, designed to collect cells from CSF in fixative solution.
- Assess, cell viability and TE in patient CSF (data for oct 1st presentation)
